Since there is not really many functions to test, after discussion with my partner, I decide to do a manual test for week 1 instead.
Run the App

Click "Word of the Day", you will go to a view with a randomly selected word entry.

Go back and click "Word list", it keeps track of progress of word memorization of each user.

Then go back and click "My Words", it directs you to five lists with levels in an ascending order. The stars represent the familiarity of each word that the user ranked.
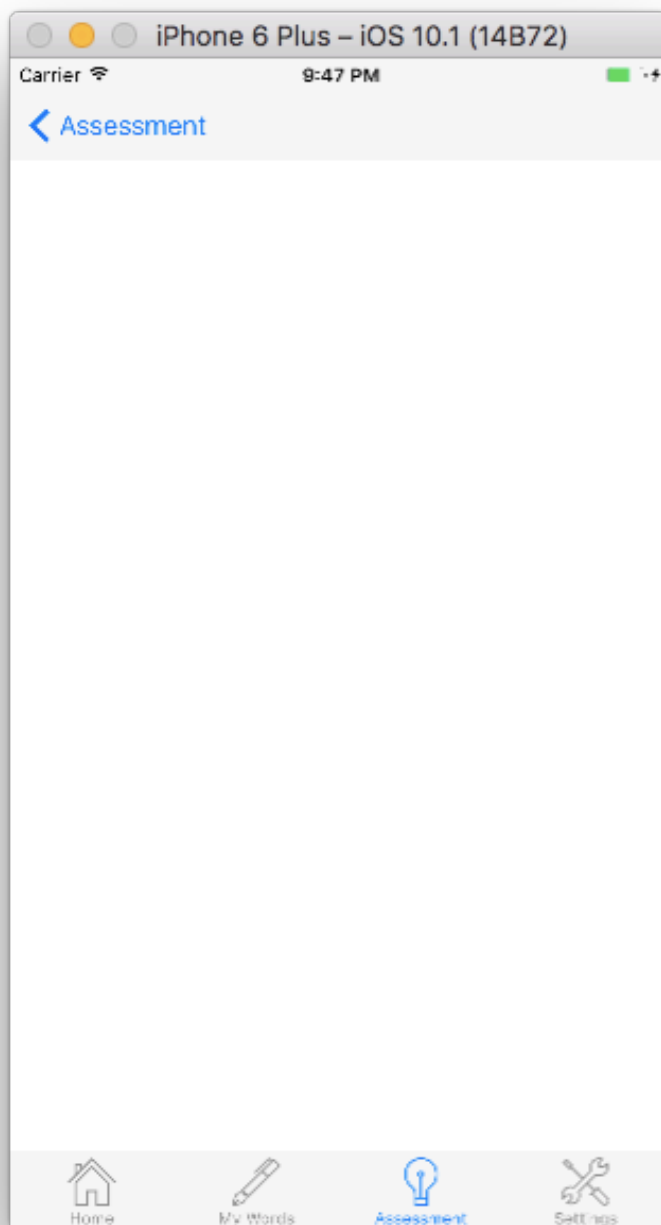

Click on each list to check words added.

Go back and click on "Assessment", it leads you to a practice test and solution.

These contents can be viewed in each view they lead to.

Each user can also change day time or night time mode, and select the color

theme they like.
